SLIDING HYPERFOCUS™

The sliding Hyperfocus™ optical system collects the LED radiance and distributes it with maximum efficiency from a perfect round floodlight beam to a highly intensive, long range spot beam. All just by one-hand sliding of the head.

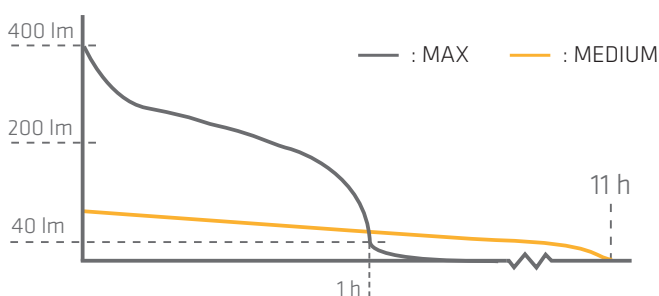

5 STEP ELECTRONICS WITH STROBE

Inside the Q7compact is a 5 step electronic control, delivering 4 different light levels and a 10HZ strobe. The switching between the different steps is easily preformed by simply touching the solid silicone switch at the tailcap switch.

FOCUS LOCK

When the torch is slid to Focus, simply turn the head a couple of degrees to the left to enable the lock-function. This will engage a brake-function which will prevent unwanted sliding from focus to flood beam.
